

Isoket[®]

Isoket 0.1% is a solution of Isosorbide Dinitrate

Each vial contains 10mg per 10ml i.e. 1ml = 1 mg

This must be diluted prior to use

INDICATIONS

- Severe or unstable angina pectoris
- Unresponsive left ventricular failure

Add 25ml of 0.1% Isoket to 25ml of normal saline.

Total 50ml contains 25mg Isoket 1ml=0.5mg Isosorbide Dinitrate

Dosage

Isoket Dosage mg per hour	Syringe flow rate ml per hour
2	4
3	6
4	8
5	10
6	12
7	14
8	16
9	18
10	20

Start at a low dose and gradually titrate upwards adjusting dose according to response and blood pressure.

In Acute pulmonary oedema, give bolus 3-5mg ISDN iv prior to infusion (as per Acute Pulmonary Oedema protocol)

Use with caution if Systolic BP <120mmHg

Stop infusion if systolic BP drops below 90mmHg
